# Zavanta®

# Global Translation System (GTS)

Zavanta's Global Translation System makes it possible to **provide a single source of truth (all policies, SOPs, best practices) to employees, in their own language,** at significantly less cost and risk than conventional approaches.

This is an add-on premium module to our Enterprise plans.

## COMPROSE
everyone knows what to do.®

# Transforming translation management into a lean process.

**Too many handoffs, error-prone process.**

**Manual processes.**

**No way to track and manage versions.**

**Takes too long, expensive. Too many steps.**

**Too many tasks done outside the system."**

Many software products provide push-button translation but haven't yet solved the biggest barriers to realizing benefits: updating, review cycle complexity, publishing, version tracking, and project management.

Beyond the initial translation, this is typically a manual, error-prone and time-consuming process, happening in different places. Just the re-formatting alone after a small change can account for 20% of translation costs!

Zavanta's GTS solves the problems inherent in conventional translation methods, streamlining all work tasks into a standardized, seamless process.

## Zavanta's GTS advantage

# Structured content model

Zavanta, breaks content up into logical "chunks" so that its easier to author, update, translate, review, re-purpose, publish, and track content.

No re-formatting when documents are changed.

Press a button, auto-generate multi-lingual outputs: online, print, and manuals.

Workflows are automatically created for each language. Approved documents are automatically published to the appropriate Language Portal.

Versioning is built-in, all changes are stored on Zavanta's audit trail.

Language versions are linked together, so changes are automatically synced across documents.

Updating time is slashed because language experts only have to translate what changed, not the whole document.

# Gamechanger for Policy & Procedure translation

✓ **Time and cost savings per document.**

Zavanta's automation significantly reduces per-document translation costs, resulting in hundreds of thousands of dollars in savings when multiplied across documents and language versions.

✓ **Reduced risk and non-compliance.**

Even the smallest translation error can increase risk. Conventional approaches lack the necessary controls, change tracking, and versioning required for auditing and regulatory compliance.

**Discover how Zavanta's GTS can transform your translation management.**
