# Zavanta

Global Translation System
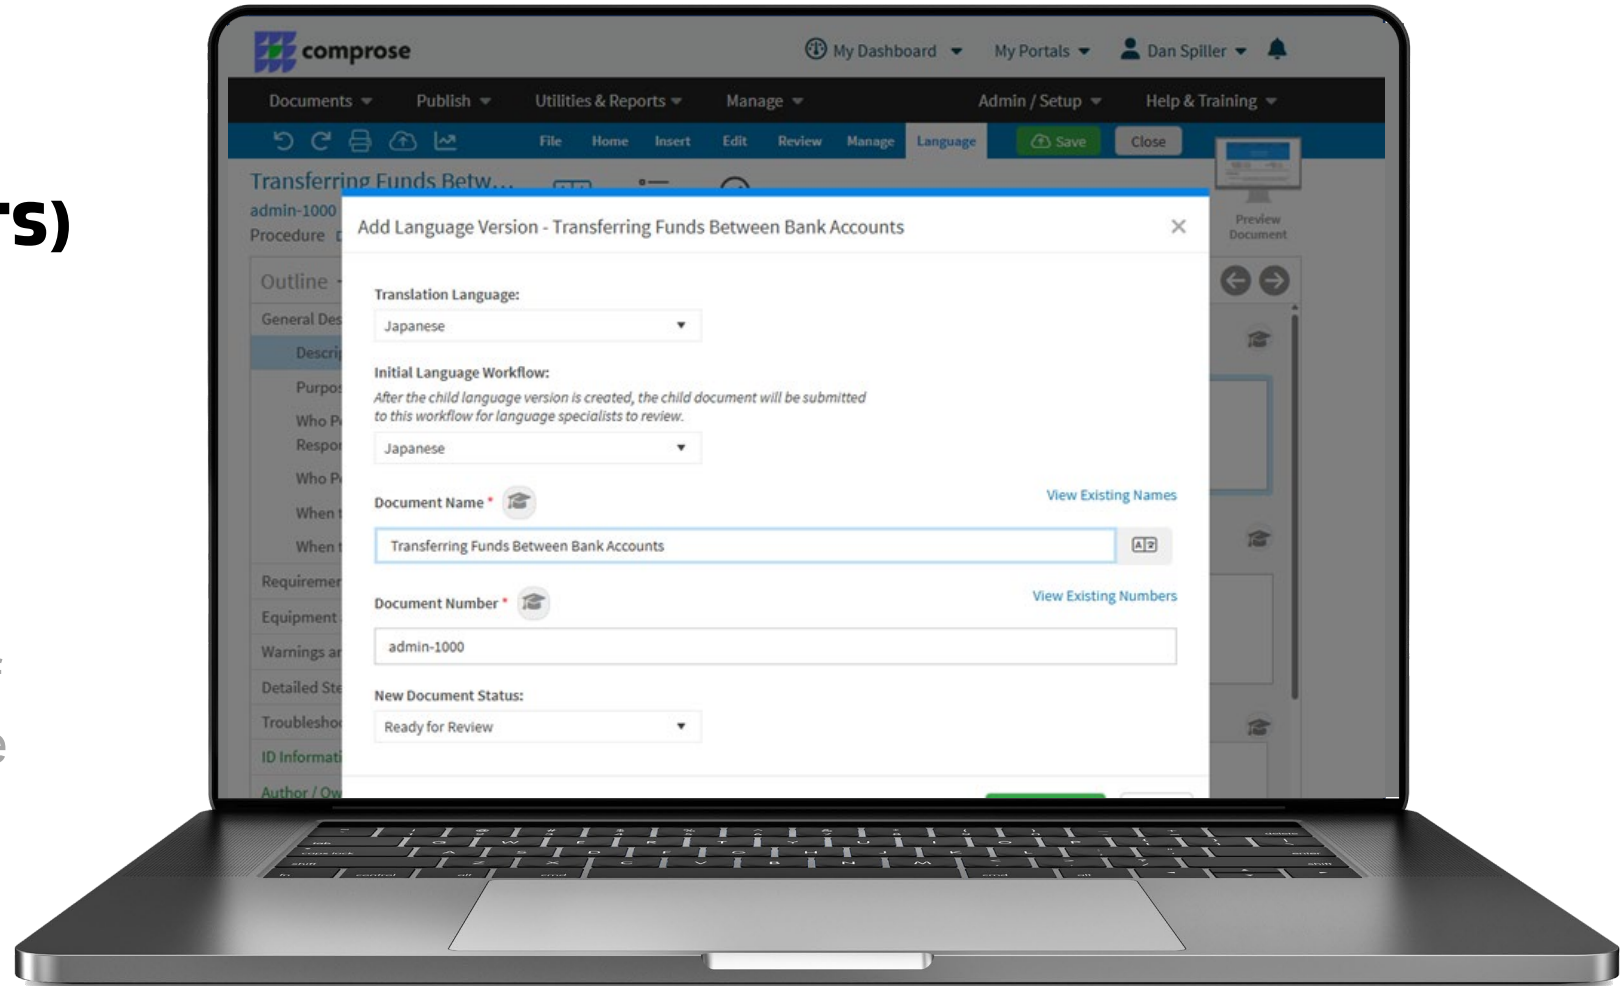

comprose

# One source of truth, multiple languages

Zavanta's Global Translation System (GTS)

helps you publish policies, SOPs, and best practices in multiple languages without losing control of versions, approvals, or compliance.

It reduces the cost and risk of managing translations outside the system.
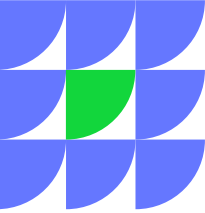

The problem with conventional translation

- **Updates create a chain reaction** across language versions

- **Reviews and approvals multiply**, and become hard to track

- **Version control breaks** when work happens in email, spreadsheets, and shared folders

- **Small changes trigger expensive rework**, including formatting and republishing

What GTS changes

Structured content model
Zavanta breaks content into reusable sections, making it easier to author, update, translate, review, repurpose, publish, and track.

- **Linked language versions** so updates stay aligned across documents

- **Automatic workflows per language**, so review and approval are

- **No reformatting on updates** because content stays structured

- **Built-in versioning and audit trail** for every change and publish event

- **Translate only what changed** to reduce update time and cost

Translation that scales without risk

Time & cost savings per document

Automation reduces per-document translation effort, with savings that compound across documents and languages.

Reduced risk & stronger compliance

Controls, change tracking, and versioning help prevent errors and support audits and regulatory confidence.

Get a closer look at Zavanta!

We'd love to show you how Zavanta can help your organization reduce risk, improve clarity, and accelerate results. Our team is here to answer questions, provide a tailored demo, and walk you through how Zavanta fits your goals.
